

Ques

We are given an integer array where every number occurs twice except for one number which occurs just once. Find that number.

Ex 1) 4, 5, 5, 4, 1, 6, 6 \rightarrow 1

Ex 2) 7, 5, 5, 1, 7, 6, 1, 6, 4 \rightarrow 4

Idea 1 :- Brute force Soln.

Traverse the array and count frequency of every element one by one.

T.C - $O(N^2)$

S.C - $O(1)$

Idea 2 :- use hashMap

Traverse the array and store frequency of every element.

T.C - $O(N)$

S.C - $O(N)$

Idea 3 :- $A \wedge A = \underline{0}$, $a \wedge b \wedge c = b \wedge c \wedge a$.

Value of :- **$120 \wedge 5 \wedge 6 \wedge 6 \wedge 120 \wedge 5$**

$$\begin{array}{ccccccc} & & \downarrow & & & & \\ 120 \wedge 120 & \wedge & 6 \wedge 6 & \wedge & 5 \wedge 5 & & \\ \hline 0 & & 0 & & 0 & \rightarrow & \underline{0} \end{array}$$

Since ^ helps to cancel out same pairs, we can use it.
Take XOR of all the elements.

```
int x = 0;

for (int i = 0; i < arr.size(); ++i) {
    x = x ^ arr[i]; // XOR operation
}

print(x);
```

T.C → O(n)
S.C → O(1)

Idea 4 :-

A = [2, 3, 5, 6, 3, 6, 2]

		2	1	0	
2	→	0	1	0	
3	→	0	1	1

2	→	0	1	0	
4	→	1	0	0	
<hr/>					
		3	6	2	
		↓	↓	↓	
		1	0	0	→ 4

```
int ans = 0;
```

T.C → O(m)

S.C → O(1)

```
for (i = 0; i < 31; i++) {
```

```
    int cnt = 0;
```

```
    for (j = 0; j < arr.size(); j++) {
```

```
        if (checkBit(arr[j], i) {
```

```
            cnt++;
```

```
        if (cnt % 2 != 0) {
```

```
            ans += 2i;
```

(cnt & 1) != 0

1 < i

Given an integer array, all the elements will occur twice except two. Find those two elements.

3rd bit

set	unset
12, 12, 10, 10, 8,	6, 6, 17

① Step 1 :- XOR of Array,

$v = 0;$

for ($i = 0; i < n; i++$) {

$v = v \oplus arr[i];$
}

② Step 2 :- from v get, get a set bit
pos.

for ($i = 0; i < 31; i++$) {

 if (check bit (v, i)) {
 pos = i;
 break;
 }

③ Split array based on pos idx,
into set & unset,

set = 0; unset = 0;

for $i = 0$ to $n-1$

 if (check bit ($arr[i], pos$))
 set = set \oplus $arr[i];$
 else {
